Faculty Workshop Completion Report

Synthetic complete example | Academic QA | 18 October 2026

01 | Report metadata

Report title: Applied Data Analytics Faculty Workshop. Department: Computer Applications. Faculty coordinator: Dr. Test Faculty (synthetic). Academic year: 2026-27. Workshop: 12-13 October 2026. Venue: Academic Computing Laboratory. Submission date: 18 October 2026.

02 | Executive summary

The two-day faculty workshop introduced spreadsheet quality checks, Python-based analysis and reporting practices. Forty faculty members were invited, thirty-four registered, thirty attended at least one session and twenty-eight completed the assessment. The report distinguishes participation, registration and completion and provides a dated evidence register for internal review. A structured feedback survey identified demand for follow-up exercises.

03 | Objectives

Objective 1: Train participants to import and validate sample tabular data. Objective 2: Demonstrate data cleaning, grouping and reproducible summary statistics. Objective 3: Evaluate practical understanding using a short post-workshop assessment. Objective 4: Record attendance and operational costs transparently.

04 | Planning and methodology

A planning meeting took place on 5 October 2026. Coordinators prepared an agenda and synthetic training datasets before the workshop. Day one covered spreadsheet validation, missing values and chart interpretation. Day two introduced Python data frames, reproducible calculations and report writing. Attendance was recorded per session and completion required a submitted exercise. The lead instructor checked sample outputs against known answers.

05 | Activity timeline

12 October 2026, 09:30-12:30: registration and spreadsheet quality checks. 12 October 2026, 13:30-16:00: cleaning workshop and case study. 13 October 2026, 09:30-12:30: Python-based analysis. 13 October 2026, 13:30-16:00: guided exercise, feedback and knowledge check. 18 October 2026: review of documentation and submission of this report.

06 | Attendance and quantitative outcomes

Invited: 40. Registered: 34. Attended at least one session: 30. Completed assessed activity: 28. Registration rate: 34/40 = 85.0%. Attendance rate among registrants: 30/34 = 88.2% after rounding. Completion rate among attendees: 28/30 = 93.3% after rounding. Each percentage has a stated denominator. The four counts describe different stages and are not intended to be added together.

Faculty Workshop Completion Report

Synthetic complete example | Academic QA | 18 October 2026

07 | Evidence register

TEST-E01: synthetic registration ledger, 34 entries, dated 12 October 2026. TEST-E02: synthetic day-one attendance ledger, 30 entries. TEST-E03: synthetic assessment log, 28 completed exercises, dated 13 October 2026. TEST-E04: synthetic itemized expense worksheet, reconciled on 16 October 2026. These are fictional QA records represented by summaries in this PDF; the HOD should request original attachments before treating them as independently verified.

08 | Budget and utilization

Approved budget: INR 15,000. Venue support: INR 3,200. Learning materials: INR 4,000. Refreshments: INR 3,900. Total spent: INR 11,100 because 3,200 + 4,000 + 3,900 = 11,100. Unspent balance: INR 3,900 because 15,000 - 11,100 = 3,900. The report contains the arithmetic needed to verify this reconciliation.

09 | Findings, limitations and conclusion

Twenty-eight completed exercises demonstrated basic use of cleaning and reporting workflows. Feedback highlighted a need for advanced visualization and larger datasets. As this is a synthetic QA report, it does not claim externally validated training outcomes. The recommended next step is a short follow-up session and independent review of the stated registers. Within the supplied test data, the dates and calculations are internally consistent.

10 | Declaration and HOD review

Coordinator: Dr. Test Faculty (synthetic). Date: 18 October 2026. Declaration: This document is fabricated solely for software QA. It is not an authentic institutional submission. Signature evidence: not provided; HOD should verify any production signature requirement manually. HOD decision: pending independent review.
